

MOELLER MFG COMPANY, INC.

Sean Paul: In 2012 our recycling programs removed 423 cubic yards of waste from the landfills and saved 767 trees. These programs have reduced our waste hauling costs by 38% from 2011. These reductions were recognized during a major growth for our company with us hiring 200 employees and opening a new production facility in Wixom. This demonstrates that good environmental management programs really do work.

Moeller proudly employs 750 people in the State of Michigan in four separate facilities, three of which are located in Wixom and one in Harbor Springs. Moeller is an aerospace parts manufacturer specializing in machined parts for turbine engines. We supply complex machined parts, made out of space age materials for all of the major turbine engine manufacturers including GE, Rolls Royce and Pratt & Whitney. You'll find our machined parts on the majority of commercial flights around the world in the large engine family of airplanes for Boeing and Airbus. Moeller utilizes CNC machines to manufacture our parts and we employ dozens of engineers to design the best manufacturing methods to produce high quality parts. We also employ hundreds of skilled machine operators, inspectors and quality people. Moeller is a growing company in the booming aerospace market and we also supply the military and energy markets too with turbine engine components.
